

ISHAN SIROHI

Meerut, India | +91 98376 02324 | ishan100sirohi@gmail.com | linkedin.com/in/ishan-sirohi | github.com/IshanSirohi

Summary

- B.Tech CSE student at MIET (AKTU) with real experience in Generative AI, full-stack development, and cloud tools. Google Cloud certified in GenAI and Responsible AI.
- Completed 2 virtual internships at Google. Built and shipped AI-powered web apps that are live and accessible online.
- Comfortable with Python, C, JavaScript, React, and MERN stack — from building ML pipelines to deploying full-stack projects on cloud platforms.

Experience

Google

Feb 2026 – Apr 2026

Google Cloud Virtual Internship — Generative AI

Remote

- Built and tested generative AI model prototypes on Google Cloud. Used prompt engineering to improve output quality.
- Set up data preprocessing and experiment tracking workflows. Kept all model runs documented and easy to reproduce.
- Presented results to mentors and completed all 3 project milestones on time. Got positive feedback from the team.

Google

Jan 2026 – Mar 2026

AI/ML Virtual Internship

Remote

- Built classification and regression models in Python using scikit-learn. Worked on real datasets from raw data to final predictions.
- Created clean data pipelines for preprocessing and transformation. Cut down on errors before model training.
- Delivered a final capstone with charts and clear write-up. Mentors found it easy to follow and reproduce.

Key Projects

AI Startup Simulator — SaaS Platform

ai-startup-simulator-liart.vercel.app

React 19, Node.js, Express, MongoDB, Google Gemini API, Vite

- Built a full MERN stack SaaS app that runs a 12-month startup simulation. Users enter business assumptions and get financial projections, a 100-point VC readiness score, and a live AI pitch defense session.
- All financial math (LTV, CAC, cash runway) runs on a custom JS engine — no numbers are delegated to AI. Gemini API handles qualitative analysis only, with automatic model fallback built in.
- Added JWT cookie auth, rate limiting, and async job processing. Live on Vercel with 20+ production deployments.

Fit-Checker — AI Outfit Analyser

fit-checker-two.vercel.app

React, Vite, JavaScript, Google Gemini API

- Built a web app where users upload outfit photos and get AI style suggestions. Responds in under 2 seconds. Live on Vercel.

World Power Climbing — Meme-Themed Browser Game

world-power-climbing.vercel.app

HTML5 Canvas, C, JavaScript, Vercel

- Built a browser game with meme-based characters (president and animal hybrids). Wrote collision physics and obstacle logic from scratch using JavaScript and HTML5 Canvas.
- Drew all the characters and UI art myself. Deployed on Vercel — no downtime since launch.

Education

Meerut Institute of Engineering and Technology (MIET)

2023 – 2027

B.Tech, Computer Science & Engineering — AKTU

Meerut, India

Meerut Public School (Main Wing)

2023

Senior Secondary — Physics, Chemistry & Mathematics (CBSE)

Meerut, India

Certifications

Google Cloud: Introduction to Generative AI • Large Language Models • Responsible AI • Generative AI Learning Path **J.P. Morgan:** Software Engineering Virtual Job Simulation (Forage)

Technical Skills

Languages: Python, C, JavaScript, HTML, CSS

Stack & Frameworks: MERN Stack (MongoDB, Express, React, Node.js), Vite, Next.js, FastAPI, Streamlit

Tools: Docker, Git, N8N

AI & Cloud: Google Cloud Platform, Gemini API, Prompt Engineering, HuggingFace

Concepts: Machine Learning, Generative AI, RAG, Data Pipelines, REST APIs, Agile

Soft Skills: Problem Solving • Teamwork • Communication • Time Management
